

Old, Dirty Attic Insulation

THE PROBLEM

Attic insulation in your home can get pretty nasty. Over many years it sits there collecting dirt, dust, pollen, bugs, rodent feces (from mice, squirrels, bats, etc.), bird droppings and nests and all kinds of undesirable things. It's possible that old insulation like this can be moved aside for a proper air sealing job that must be done prior to adding enough **TruSoft** blown cellulose insulation to today's standards - but why not remove the old, nasty insulation from your home and start fresh?

DR. ENERGY SAVER® SOLUTION

Insulation Removal and Vacuuming

clean, new, fresh **TruSoft** cellulose insulation or one of our other Dr. Energy Saver strategies to make your home comfortable and energy efficient.

Unit of Measure - Square Feet

Dr. Energy Saver will conduct the unpleasant task of removing the damaged, soiled insulation in your attic. Batt insulation is bagged and then the attic is vacuumed to remove pieces, parts and dust. Loose fill insulation is vacuumed with a giant vacuum located outside with giant filter bags and a very long, fat hose.

Result - Now your attic is clean! It's ready for proper air sealing and installation of
